

Contents

1	Interpolation and Approximation	1
1.1	Introduction	1
1.2	Approximation of a Function by Another Function	1
1.2.1	Approximation Functions	2
1.2.2	Polynomial Approximation	2
1.3	Determination of Interpolation Polynomials	4
1.3.1	Calculation of the Interpolation Polynomial	4
1.3.2	Newton Interpolation Polynomial	5
1.3.3	Lagrange Interpolation Polynomial	9
1.3.4	Polynomial Interpolation with Regularly Spaced Points ...	11
1.3.5	Hermite Polynomials	14
1.3.6	Chebyshev Polynomials and Irregularly Spaced Points ...	16
1.3.7	Interpolation by Cubic Hermite Polynomial	22
1.3.8	Interpolation by Spline Functions	25
1.3.9	Interpolation by Parametric Splines	29
1.4	Bézier Curves	32
1.5	Discussion and Conclusion	34
1.6	Exercise Set	35
2	Numerical Integration	45
2.1	Introduction	45
2.2	Newton and Cotes Closed Integration Formulas	45
2.2.1	Global Integration on Interval $[a, b]$	46
2.2.2	Integration on Subintervals	49
2.3	Open Newton and Cotes Integration Formulas	50
2.4	Conclusions on Newton and Cotes Integration Formulas	51
2.5	Repeated Integration by Dichotomy and Romberg's Integration ...	52
2.6	Numerical Integration with Irregularly Spaced Points	55
2.6.1	Reminder on Orthogonal Polynomials	55
2.6.2	Gauss–Legendre Quadrature	59
2.6.3	Gauss–Laguerre Quadrature	63

2.6.4	Gauss–Chebyshev Quadrature	64
2.6.5	Gauss–Hermite Quadrature	64
2.7	Discussion and Conclusion	64
2.8	Exercise Set	65
3	Equation Solving by Iterative Methods	69
3.1	Introduction	69
3.2	Graeffe’s Method	70
3.3	Bernoulli’s Method	71
3.4	Bairstow’s Method	75
3.5	Existence of a Root of a Function	78
3.6	Bisection and Regula Falsi Methods	79
3.6.1	Bisection Method	79
3.6.2	Regula Falsi Method	80
3.7	Method of Successive Substitutions	82
3.8	Newton’s Method and Derived Methods	85
3.8.1	Newton’s Method	85
3.8.2	Secant Method	89
3.9	Wegstein’s Method	90
3.10	Aitken’s Method	92
3.11	Homotopy Method	95
3.11.1	Introduction	95
3.11.2	Continuation Method	95
3.12	Discussion and Conclusion	99
3.13	Exercise Set	99
4	Numerical Operations on Matrices	107
4.1	Introduction	107
4.2	Reminder About Matrices	107
4.3	Reminder on Vectors	109
4.4	Linear Transformations and Subspaces	111
4.4.1	Gershgorin Theorem	113
4.4.2	Cayley–Hamilton Theorem and Consequences	114
4.4.3	Power Method	116
4.5	Similar Matrices and Matrix Polynomials	118
4.6	Symmetric Matrices and Hermitian Matrices	118
4.7	Reduction of Matrices Under a Simple Form	123
4.8	Rutishauser’s LR Method	124
4.9	Householder’s Method	128
4.10	Francis’s QR Method	133
4.11	Discussion and Conclusion	144
4.12	Exercise Set	144

5	Numerical Solution of Systems of Algebraic Equations	149
5.1	Introduction	149
5.2	Solution of Linear Triangular Systems	149
5.3	Solution of Linear Systems: Gauss Elimination Method	150
5.4	Calculation of a Matrix Determinant	157
5.5	Gauss–Jordan Algorithm	158
5.6	LDL^T Factorization	162
5.7	Cholesky’s Decomposition	162
5.8	Singular Value Decomposition (SVD)	164
5.9	Least Squares Method for Linear Overdetermined Systems	166
5.10	Iterative Solution of Large Linear Systems (Jacobi and Gauss–Seidel)	169
5.11	Solution of Tridiagonal Linear Systems of Equations	173
5.12	Solution of Nonlinear Systems: Newton–Raphson Method	174
5.13	Solution of Nonlinear Systems by Optimization	176
5.14	Discussion and Conclusion	178
5.15	Exercise Set	178
6	Numerical Integration of Ordinary Differential Equations	189
6.1	Introduction	189
6.1.1	Linear and Nonlinear Ordinary Differential Equations	190
6.1.2	Uniqueness of the Solution	191
6.2	Initial Value Problems	191
6.2.1	One-Step Methods	192
6.2.2	Multi-Step Methods	209
6.2.3	Open Integration Formulas	210
6.3	Stability of Numerical Integration Methods	217
6.4	Stiff Systems	220
6.5	Differential–Algebraic Systems	221
6.6	Ordinary Differential Equations with Boundary Conditions	223
6.7	Discussion and Conclusion	224
6.8	Exercise Set	225
7	Numerical Integration of Partial Differential Equations	239
7.1	Introduction	239
7.2	Some Examples of Physical Systems	239
7.2.1	Heat Transfer by Conduction	240
7.2.2	Mass Transfer by Diffusion	241
7.2.3	Wave Equation	241
7.2.4	Laplace’s Equation	242
7.3	Properties of Partial Differential Equations	243
7.3.1	Generalities	243
7.3.2	Well-Posed Problem	244
7.3.3	Classification	244
7.3.4	Characterization of the Solutions	245

7.4	Method of Characteristics	246
7.4.1	Linear First Order Partial Differential Equation	246
7.4.2	Nonlinear First Order Partial Differential Equation	253
7.4.3	Quasi-Linear Second Order Partial Differential Equation	254
7.5	Finite Difference Method	256
7.5.1	Introduction	256
7.5.2	Discretization	257
7.6	Automatic Calculation of Partial Derivatives	285
7.6.1	Calculation of $\left(\frac{\partial u}{\partial x}\right)_0$ and $\left(\frac{\partial u}{\partial x}\right)_N$	285
7.6.2	Calculation of $\left(\frac{\partial^2 u}{\partial x^2}\right)_0$ and $\left(\frac{\partial^2 u}{\partial x^2}\right)_N$	287
7.6.3	Some Other Differentiation Schemes	289
7.6.4	Numerical Differentiation by Complex Numbers	291
7.7	Method of Lines	292
7.7.1	Case of Dirichlet Boundary Conditions	293
7.7.2	Case of Boundary Neumann Conditions	293
7.7.3	Application of the Method of Lines to the Simulation of a Heat Exchanger	295
7.8	Finite Differences on an Irregular Grid	299
7.9	Solution of a Partial Differential Equation by Splines	300
7.10	Spectral Methods	304
7.10.1	Method of Weighted Residuals	304
7.10.2	Radial Basis Functions	306
7.10.3	Polynomial Collocation for an Initial Value Ordinary Differential Equation	314
7.10.4	Method of Weighted Residuals for an Ordinary Differential Equation with Boundary Conditions	314
7.10.5	Method of Weighted Residuals for a Partial Differential Equation	320
7.11	Moving Grid	323
7.11.1	Theory	324
7.11.2	Test on an Analytic Function	327
7.11.3	Implementation in a Physical Problem	327
7.11.4	Short Presentation of the General Framework	331
7.11.5	Application to a Liquid Phase Chromatography, Approximation in the Equilibrium Case	331
7.11.6	Application to a Liquid Phase Chromatography, Rigorous Treatment for the Case with LDF	332
7.12	Finite Volume Method	335
7.12.1	Introduction	335
7.12.2	Mesh	337
7.12.3	Integration on any Control Volume	338
7.12.4	Account of Boundary Conditions at Left	341
7.12.5	Account of Boundary Conditions at Right	342
7.12.6	Case of an Interface Between Two Solids of Different Conductivities	343

7.12.7	Numerical Solving	345
7.12.8	Two-Dimensional Problem	349
7.12.9	Extension to Flows	350
7.12.10	Conservation Applied to a Control Volume	351
7.12.11	SIMPLER Algorithm	352
7.13	Finite Element Method	353
7.13.1	Step 1: Elements and Nodes	355
7.13.2	Step 2: Functions of Polynomial Interpolation	356
7.13.3	Steps 3–4: Determination of the Conductance Matrices and Nodal Flux, Determination by Assembling of the Global Conductance Matrix and the Global Equivalent Nodal Flux Vector	359
7.13.4	Convergence, Compatibility, Completeness	388
7.13.5	Case of Transient Systems	389
7.13.6	Heat Transfer and Fluid Transport in a Tube	396
7.13.7	Flow in a Porous Medium	403
7.13.8	Diffusion—Chemical Reaction	404
7.13.9	Fluid Mechanics	406
7.13.10	Two-Dimensional Formulation	410
7.13.11	Examples of 2D and 3D Simulations	413
7.14	Boundary Element Method	417
7.14.1	Mathematical Preliminaries	418
7.14.2	Potential Problems	420
7.14.3	Green’s Function Method	421
7.14.4	Analytical-Numerical Boundary Element Method	428
7.14.5	Boundary Element Method in 2D Heat Transfer	434
7.15	Discussion and Conclusion	440
7.16	Exercise Set	442
8	Analytical Methods for Optimization	455
8.1	Introduction	455
8.2	Mathematical Reminder	455
8.3	Introduction	456
8.4	Functions of One Variable	457
8.4.1	Infinite Interval	457
8.4.2	Finite Interval	461
8.4.3	Presence of Discontinuities	462
8.5	Functions of Several Variables	462
8.5.1	Infinite Interval	462
8.5.2	Finite Interval	462
8.5.3	Presence of Discontinuities	463
8.6	Function Subject to Equality Constraints	463
8.6.1	Jacobi’s Method	463
8.6.2	Lagrange Multipliers	465
8.6.3	Signification of Lagrange Multipliers	467
8.6.4	Conditions of Minimum	468

8.6.5	Conditions of Minimum by the Projected Gradient in the Case of Equality Constraints	468
8.7	Function Subject to Inequality Constraints	473
8.7.1	Use of Slack Variables	473
8.7.2	Karush–Kuhn–Tucker (KKT) Parameters	474
8.7.3	Conditions of Minimum by the Projected Gradient in the Case of Inequality Constraints	478
8.8	Function Subject to Equality and Inequality Constraints	484
8.8.1	Setting of the Problem	484
8.8.2	Lagrange Duality	486
8.9	Sensitivity Analysis	487
8.10	Discussion and Conclusion	488
8.11	Exercise Set	489
9	Numerical Methods of Optimization	505
9.1	Introduction	505
9.2	Functions of One Variable	505
9.2.1	Bisection Method	506
9.2.2	Newton’s Method	507
9.2.3	Fibonacci’s Method	508
9.3	Functions of Several Variables	512
9.4	Methods of Direct Search	512
9.4.1	Simple One Variable Search	512
9.4.2	Simplex Method	513
9.4.3	Acceleration Methods	514
9.4.4	Nelder–Mead Simplex	519
9.4.5	Box Complex	522
9.4.6	Genetic Algorithm	524
9.5	Gradient Methods	529
9.5.1	Case of a Quadratic Function	529
9.5.2	Case of a Non-quadratic Function	532
9.5.3	Method of Steepest Descent	533
9.5.4	Search in a Given Direction \mathbf{s}	535
9.5.5	Conjugate Gradient Method	539
9.5.6	Newton–Raphson Method	547
9.5.7	Quasi-Newton Method	551
9.5.8	Methods for the Sums of Squares	556
9.5.9	Gauss–Newton Method	557
9.5.10	Levenberg–Marquardt Method	558
9.5.11	Quasi-Newton Approximation	561
9.5.12	Systems of Nonlinear Equations	563
9.6	Discussion and Conclusion	563
9.7	Exercise Set	563

10	Linear Programming	575
10.1	Introduction	575
10.2	Formulation of the Problem Based on Examples	576
10.2.1	Use of Slack Variables	576
10.2.2	Use of Slack and Artificial Variables	578
10.2.3	Conditions of Optimality	579
10.3	Solving the Problem: Simplex Tableau	580
10.3.1	Geometric Interpretation on Example 10.1	580
10.3.2	Simplex Tableau with Slack and Artificial Variables	585
10.4	Theoretical Solution	588
10.5	Case of Simultaneous Inequality and Equality Constraints	592
10.6	Duality	595
10.6.1	Example of Duality	596
10.6.2	Demonstration of the Duality Theorem	596
10.6.3	Demonstration of the Duality Theorem Based on the Lagrangian	600
10.7	Interior Point Methods	604
10.7.1	Karmarkar Projection Method	604
10.7.2	Affine Transformation	610
10.8	Discussion and Conclusion	614
10.9	Exercise Set	615
11	Quadratic Programming and Nonlinear Optimization	623
11.1	Introduction	623
11.2	Quadratic Optimization, Karush–Kuhn–Tucker Conditions and Solution by the Simplex	624
11.2.1	First Presentation	624
11.2.2	Second Presentation	624
11.2.3	Solution Under the Form of a Simplex Problem	625
11.3	Quadratic Optimization, Barrier Method	627
11.4	Nonlinear Optimization by Successive Quadratic Programming	631
11.4.1	Introduction	631
11.4.2	Notion of Feasible Region and Tangent Cone	631
11.4.3	Successive Quadratic Programming (SQP)	633
11.4.4	Specificities and Difficulties of the SQP Problem	637
11.5	Discussion and Conclusion	644
11.6	Exercise Set	644
12	Dynamic Optimization	653
12.1	Introduction	653
12.2	Problem Statement	655
12.3	Variational Method in the Mathematical Framework	657
12.3.1	Variation of the Criterion	658
12.3.2	Variational Problem Without Constraints: Fixed Boundaries	659

12.3.3	Variational Problem with Constraints: General Case	660
12.3.4	Hamilton–Jacobi Equation	663
12.4	Dynamic Optimization in Continuous Time	665
12.4.1	Variational Methods	665
12.4.2	Variation of the Criterion	666
12.4.3	Euler Conditions	668
12.4.4	Weierstrass Condition and Hamiltonian Maximization	670
12.4.5	Hamilton–Jacobi Conditions and Equation	671
12.4.6	Maximum Principle	674
12.4.7	Singular Arcs	677
12.4.8	Numerical Issues	683
12.5	Dynamic Programming (Discrete Time)	688
12.5.1	Classical Dynamic Programming	688
12.5.2	Hamilton–Jacobi–Bellman Equation	697
12.6	Conclusion	698
12.7	Exercise Set	698
